

Art By Artificial Intelligence [Test S1 2022-2023]

Wall Street Journal, 03/13/2017, 2min35s

1. **“Daddy’s car” is ...** 1
☐ a hit on iTunes. ☐ a Beatles track. ☒ an AI generated tune.
2. **AI can generate lyrics.** 1,5
☐ True ☒ False
Justification: humans have to contribute the lyrics
3. **Angelina is ...** 1
☐ a person. ☒ a software. ☐ a videogame.
4. **Where does the AI select images and sound effects from in order to create a game atmosphere?** 2
- db
- Web
5. **What does the game “To that sect” consist in?** 1
☐ Collecting lethal weapons on a ship.
☐ Killing members of a religious group.
☒ Picking up items and staying away from others.
6. **AI generated games should improve ...** 1
☒ their narratives. ☐ their characters. ☐ their special effects.
7. **Musicians and composers at Sony’s Computer Music Lab are reluctant to use AI.** 1,5
☐ True ☒ False
Justification: embracing artificial intelligence as a means to enhance their creativity

Art By Artificial Intelligence [Test S1 2022-2023]**Wall Street Journal, 03/13/2017, 2min35s**<https://youtu.be/B682RpmK0Xk>

Engineers and artists alike are experimenting with artificial intelligence to see what kind of imagery, stories, poetry, and music, machines can generate with, for now at least, a little input from humans. Companies like Sony and Google are testing the handiwork of AI generated music. For this track called “Daddy’s car”, engineers at Sony’s Computer Science Laboratory developed an AI called Flow machine to create music in the style of the Beatles. After feeding sheet music into the algorithm to teach the AI, machines generated the melody and harmony. Maybe you won’t find it on iTunes anytime soon. Researchers say it’s a decent proof of concept of how AI can generate a tune, but humans have to contribute the lyrics, so the likelihood of an entirely machine-made commercial hit is for now just a pipe dream.

AI is also influencing the gaming world. Mike Cook, a computational creativity researcher in the UK is developing a software called Angelina to test whether AI can develop games on their own. Angelina scans newspaper articles for themes. Whether a story mentions the names of politicians or celebrities, a violent incident or an issue such as environmental conservation, it then selects related images and sound effects from its database and from around the web to create a game atmosphere to match. Angelina can also create more visually complex games based on description or phrases. This game called “To that sect”, it’s a pun on the phrase to that effect. The objective of “To that sect” is to collect these floating ship objects while avoiding these lethal objects Angelina call tombs. So far, Angelina’s games lack the sophisticated storylines of many popular videogames today. Most are driven by an objective like navigating a maze.

Back at Sony’s Computer Music Lab, musicians and composers are embracing artificial intelligence as a means to enhance their creativity. In October, a handful of artists performed their AI composed tunes at a concert in Paris, and recently “Daddy’s car” was named a semifinalist in an international songwriting competition.
