

Using Chat-GPT Code for Indie Games!!! [Test S2 2022-2023]

/ 10

Royal Skies, 01/17/2023, 2min37s

1. **The man is...** 1
 - ☐ a beginner level programmer.
 - ☒ an intermediate level programmer.
 - ☐ a master and a genius in programming.
2. **The man...** 1
 - ☐ barely knows the code that's related to 3D animation.
 - ☐ is learning about the code that's related to 3D animation.
 - ☒ knows pretty well the code that's related to 3D animation.
3. **He tested Chat-GPT asking it...** 1
 - ☒ basic codes. ☐ difficult codes. ☐ impossible codes.
4. **What is his favorite movement/ action in his games?** 1

⇒ rotation/spinning
5. **Chat-GPT gave him...** 1
 - ☐ an incorrect code.
 - ☒ a correct answer and a tip.
 - ☐ a new code to control rotation.
6. **The rate of accuracy in Chat-GPT's answer...** 1
 - ☐ is constant, no matter the questions.
 - ☐ is related to the way you formulate your questions.
 - ☒ depends on the level of difficulty of your coding project.
7. **When asked to create and organize a list, Chat-GPT...** 1
 - ☐ isn't able to give a solution.
 - ☐ creates the list but fails to organize it.
 - ☒ provides several relevant solutions to the question.
8. **Before Chat-GPT, where did the programmers ask questions when they had difficulties?** 1

Forums/discord

⇒
9. **The third option is better than the other ones because the answer...** 1
 - ☐ comes from a team of pro developers.
 - ☐ is sometimes long to get but always accurate.
 - ☒ is instantaneous and can be verified right away.
10. **One can help other programmers by ...** 1
 - ☐ stopping using Chat-GPT.
 - ☒ correcting and giving Chat-GPT the correct answer.
 - ☐ giving them a thumbs down when their answers on the thread are wrong.

Using Chat-GPT Code for Indie Games!!! [Test S2 2022-2023]**Royal Skies, 01/17/2023, 2min37s**<https://www.youtube.com/watch?v=Mjsh8teRds>

Now I have no shame in admitting that I'm not a full-time programmer. Those guys are on a completely different level than me. I have enormous respect for those guys, I could never do what they do. But I do know enough code to make my own video games as an indie dev. Anyway, I consider myself more of an intermediate level programmer, so by no means am I a master but I do know enough to be dangerous.

And I really feel as an intermediate level programmer, Chat-GPT has been a complete game changer for me as an indie developer. For example, I might not be a coding genius but I'm very familiar with the code that's related to 3D animation. So just to do some quick test as to how reliable the code from chat really is, I figured I'd asked it how to do some simple stuff that I already know how to do. So, I asked it what would the c-sharp unity 3D code look like if I wanted to rotate and spin an object on the y-axis at a speed of 0.5 every frame. And to my surprise, it gave me this. And I recognized this code! I spin things all the time in all my games. Spinning is my favorite and I use this code a lot. This is in fact real code to control rotation in unity. If I copy and paste this line straight into the game, you will see it does exactly what I asked it to do. And it even tells us that we should probably be using Time.Delta Time. How cool is that?

Now obviously, these are small examples and the bigger and more complicated your coding project is, the less likely it will be to accurately succeed in giving you what you want without errors.

But it's not limited to small one-liners. For example, if I ask it to write the code for me that creates a list variable named database that contains 10 integer values and in the update method organizes that list from greatest to least in unity using c-sharp, it will give me multiple solutions. It has organized my list from greatest to least, exactly the way I asked, which is crazy because the most frustrating part of being a beginner or intermediate level programmer like myself is when you're stuck, before you only really had two options which was go to a programming Discord or go to the unity forums and make a thread for your question and pray to god that somebody would answer you tomorrow.

But now, there's a third option: you could ask Chat-GPT today and maybe get your answer immediately. When you're working with code, you instantly know whether what it tells you is true or false right away. And if it gives you the wrong answer you can give it a thumbs down and tell it the right answer to help it learn from its mistakes, which in turn will help all the rest of us.
